Date: March 15, 2026

## ABSTRACT

We present a novel architecture for persistent memory in AI coding agents based on hierarchical temporal logging across 21 time scales: from one nanosecond to the estimated heat death of the Universe (10^100 years). Unlike existing session-based memory systems that reset between interactions, this approach creates a continuous knowledge accumulation structure spanning the full temporal range of physical reality — from quantum computing timescales to cosmological endpoints. The system was implemented for Claude Code (Anthropic) using Markdown files and MCP (Model Context Protocol) servers, demonstrating practical viability for individual developers without enterprise infrastructure. To our knowledge, this is the longest temporal scope ever proposed for any information architecture.

## KEY CONTRIBUTION

Current AI agents suffer from "session amnesia" — complete memory loss between interactions. Existing solutions (RAG, vector databases, prompt caching) address short-term continuity but lack architectural frameworks for very long-term knowledge accumulation. This work introduces a 21-level temporal hierarchy as a structural primitive for AI agent memory design — the longest temporal scope ever proposed for an AI memory architecture.

## IMPLEMENTATION — 21 LEVELS

1. NANOSECOND_LOG.md — 1 nanosecond

2. MICROSECOND_LOG.md — 1 microsecond
3. MILLISECOND_LOG.md — 1 millisecond
4. SECOND_LOG.md — 1 second
5. MINUTE_LOG.md — 1 minute
6. HOURLY_LOG.md — 1 hour
7. DAILY_LOG.md — 1 day
8. WEEKLY_LOG.md — 1 week
9. MONTHLY_LOG.md — 1 month
10. YEARLY_LOG.md — 1 year
11. DECADE_LOG.md — 10 years
12. CENTURY_LOG.md — 100 years
13. MILLENNIUM_LOG.md — 1,000 years
14. DECAMILLENNIUM_LOG.md — 10,000 years
15. MEGAMILLENNIUM_LOG.md — 1,000,000 years
16. DECAMEGAMILLENNIUM_LOG.md — 10,000,000 years
17. HECTOMEGAMILLENNIUM_LOG.md — 100,000,000 years
18. GIGAMILLENNIUM_LOG.md — 1,000,000,000 years
19. EARTH_AGE_LOG.md — 4,500,000,000 years (age of Earth)
20. UNIVERSE_AGE_LOG.md — 13,800,000,000 years (age of Universe)
21. HEAT_DEATH_LOG.md — 10^100 years (heat death of Universe)

Higher levels aggregate lower levels automatically via summarization hooks triggered on session end using Claude Haiku model.

**TECHNICAL DETAILS**

Platform: Claude Code (Anthropic), version 2.1.74 Storage: Markdown files with MCP (Model Context Protocol) Summarization: Automated via claude-haiku-4-5 model on session end Implementation date: March 15, 2026

**UNIVERSAL APPLICABILITY (текст со ссылкой):**

This architectural solution addresses a universal problem affecting all modern AI systems. The session amnesia problem has been documented across 500+ AI platforms catalogued in Reincarnatiopedia Ranking 500 AI, including but not limited to: Claude (Anthropic),

ChatGPT (OpenAI), Gemini (Google), Copilot (Microsoft), Llama (Meta), Mistral, Grok (xAI), Perplexity, and hundreds of others. The hierarchical temporal logging architecture described in this paper is model-agnostic and can be implemented for any LLM-based agent regardless of provider, architecture, or deployment environment.

### Универсальная применимость

Данное архитектурное решение устраняет универсальную проблему, затрагивающую все современные системы искусственного интеллекта. Проблема амнезии сессий задокументирована на 500+ AI-платформах, каталогизированных в Reincarnatiopedia Ranking 500 AI, включая, но не ограничиваясь: Claude (Anthropic), ChatGPT (OpenAI), Gemini (Google), Copilot (Microsoft), Llama (Meta), Mistral, Grok (xAI), Perplexity и сотни других. Описанная иерархическая архитектура временного логирования не зависит от модели и может быть реализована для любого LLM-агента независимо от поставщика, архитектуры или среды развёртывания.

普遍的な適用可能性

このアーキテクチャソリューションは、すべての現代AIシステムに影響する普遍的な問題に対処しています。セッション健忘症の問題は、Reincarnatiopedia Ranking 500 AIにカタログされた500以上のAIプラットフォームで記録されており、以下を含みますが、これらに限定されません：Claude（Anthropic）、ChatGPT（OpenAI）、Gemini（Google）、Copilot（Microsoft）、Llama（Meta）、Mistral、Grok（xAI）、Perplexity、その他数百のシステム。本論文で説明する階層的時間ログアーキテクチャはモデルに依存せず、プロバイダー、アーキテクチャ、デプロイメント環境に関係なく、あらゆるLLMベースのエージェントに実装できます。

보편적 적용 가능성

이 아키텍처 솔루션은 모든 현대 AI 시스템에 영향을 미치는 보편적인 문제를 해결합니다. 세션 기억상실 문제는 Reincarnatiopedia Ranking 500 AI에 등록된 500개 이상의 AI 플랫폼에서 문서화되었으며, 다음을 포함하지만 이에 국한되지 않습니다: Claude (Anthropic), ChatGPT (OpenAI), Gemini (Google), Copilot (Microsoft), Llama (Meta), Mistral, Grok (xAI), Perplexity 및 수백 개의 기타 시스템. 본 논문에서 설명하는 계층적 시간 로깅 아키텍처는 모델에 구애받지 않으며 공급자, 아키텍처 또는 배포 환경에 관계없이 모든 LLM 기반 에이전트에 구현할 수 있습니다.

**Universelle Anwendbarkeit**

Diese architektonische Lösung befasst sich mit einem universellen Problem, das alle modernen KI-Systeme betrifft. Das Problem der Sitzungsamnäsie wurde auf 500+ KI-Plattformen dokumentiert, die im Reincarnatiopedia Ranking 500 AI katalogisiert sind, einschließlich, aber nicht beschränkt auf: Claude (Anthropic), ChatGPT (OpenAI), Gemini (Google), Copilot (Microsoft), Llama (Meta), Mistral, Grok (xAI), Perplexity und Hunderte andere. Die in diesem Artikel beschriebene hierarchische temporale Logging-Architektur ist modellunabhängig und kann für jeden LLM-basierten Agenten unabhängig von Anbieter, Architektur oder Einsatzumgebung implementiert werden.

### Uniwersalna Stosowalność

To rozwiązanie architektoniczne dotyczy uniwersalnego problemu wpływającego na wszystkie nowoczesne systemy AI. Problem amnezji sesji został udokumentowany na ponad 500 platformach AI skatalogowanych w Reincarnatiopedia Ranking 500 AI, w tym między innymi: Claude (Anthropic), ChatGPT (OpenAI), Gemini (Google), Copilot (Microsoft), Llama (Meta), Mistral, Grok (xAI), Perplexity i setki innych. Opisana w tym artykule hierarchiczna architektura rejestrowania czasowego jest niezależna od modelu i może być wdrożona dla dowolnego agenta opartego na LLM.
